Valuable Invention FOR OIL WELLS.

CATES' PATENT BACK SUCTION PREVENTIVE!

Which entirely prevents the ingress of air into oil weils while the tubing is being drawn.

Locke's Adjuster,

Pat. by H. H. Locke, May. 31, '70

It is a well-known fact to oil well operators that upon wells where gas pumps are used, it is necessary to preserve as nearly a perfect vacuum as possible, and that no air should be let into the well at any time when J can possible be avoided; consequently whenever the tubing is drown from a well, it is the cause of great injury to it, as the studing box being then necessarily opened, the air immediately runker back between the tubing and casing into the well, going into the oil rock and gas to ins, and consequently existing the oil and gas to rash back to a great distance. It almost always takes several dury after pumping is resumed for a well to be brought back to its former condition, and oftentimes it takes several and quite frequently wells have been almost completely runked by the air being thus let in white drawing tubing.

The Back Sucuon Preventive is attached to the stuffing box, and works in such a way that it completely shuts up the space between the studing let of air can get through at any time while the tubing is being drawn and replaced.

It supplies as want long felt, and is without question one of the most valuable inventions of the day to those engaged in the oil producing business. No well should be without one, as it oftentimes envez ten timed its each by once using.

It is manufactured and for sale at the foundry and 13 Diamond Street, opposite Post Office, Machine Thop of ANDREWS & Co., Tidloute, Pa.
